IE-GMI-4-01-F01

To whom it may concern,

According to our policy of maximum responsibility on legislative issues, Global Metwire Injection hereby reports on the steps that have been taken (according to the European regulation 1907/2006) concerning the registration, evaluation, authorization and restriction of chemicals (REACH). REACH regulation is intended to ensure a high level of human health protection, environmental protection and the free movement of substances.

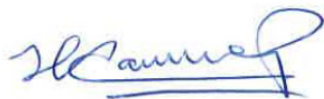

Global Metwire Injection is an intermediate user and an importer, depending on the substance.

As an intermediate user, we have been and are in contact with our suppliers to ensure that appropriate steps have been taken with respect to the suppliers obligations under the REACH regulations regarding the products they provide to us. Our suppliers have confirmed, through the register, their compliance with the REACH regulations for the substances. Global Metwire Injection has also provided information to its suppliers about the use of the substances supplied to ensure that these uses are included and identified in the registration of substances.

As an importer, Global Metwire Injection is registered for some substances.

For any matter relating to the REACH do not hesitate to contact me at this address:
mcmt@gmispain.net

Regards,

Jose Luis Carmona
Chairman
